

AMERICAN PETROLEUM INSTITUTE

THE PROBLEM

Oil and natural gas are the cornerstone of our economy. Together they supply more than 60 percent of our nation's energy. In order to meet the market demand, and adhere to stringent regulations, the petroleum industry requires some of the toughest regulations in the fan industry. Many fan companies cannot meet the stringent testing and manufacturing standards that API requires.

THE SOLUTION

As America's largest fan manufacturer, Clarage takes pride in leading the way in the API market. We know the API standards because we help write them. Clarage engineers currently sit on the API 673 committees. That's why we built the largest fan testing facility in the U.S. We are able to conduct mechanical run tests and performance tests according to the AMCA standard. Our in-house facility will test fans using motors up to 4,000 HP. When millimeters matter, and it has to be perfect, get a Clarage fan.

TYPICAL APPLICATIONS

- > Boilers
- > Fired Heaters – FD and ID
- > High Temperature
- > Process Ventilation
- > Petrochemical
- > Oil and API
